

GLOBAL AVIONICS TRAINING SPECIALISTS, LLC

AVIONICS AN OVERVIEW

COURSE OVERVIEW

I. INTRODUCTION

A. System Description

This course of instruction is designed as an introduction to the avionic systems used on today's modern business aircraft, helicopters and regional airliners. Discussion centers on the roles and responsibilities of the systems rather than how the system works. What information the system is providing is discussed in detail.

B. Course Objectives

Students completing this course of instruction will be familiar with the roles and responsibilities of the avionics systems installed on the aircraft in their company's fleet, or the aircraft that their company services.

C. Arrangement

Based on past experience, Global Avionics Training Specialists have arranged the subject material in an order best suited to continuity and ease of comprehension.

D. Duration

The course is three days in length for a total of 24.0 hours.

E. Student Prerequisite

It is suggested that students attending this course be line maintenance technicians with responsibility for servicing, troubleshooting and maintaining avionic systems.
